

1 Menu Home Screen

We can list the item categories here instead of different menus. Eg - Tacos, Burritos, Drinks, etc

2 Menu List Screen

This screen is pretty important to the app and should be designed brilliantly so that it is well arranged to display all the details as well as easy on the eye.

3 Dish Details Screen

We can probably change the layout of this screen a little, let me know your thoughts.

Ingredients can be linked to Wikipedia.

- 1. Previous Dish
- 2. Add to favorites (Where should this be shown? We do not have enough space for this)
- 3. Share on twitter/facebook/mail

4 Submit Rating Pop

5 Sort Picker Screen

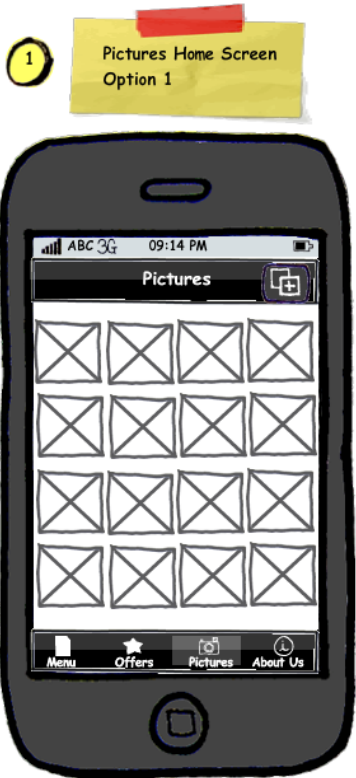

1

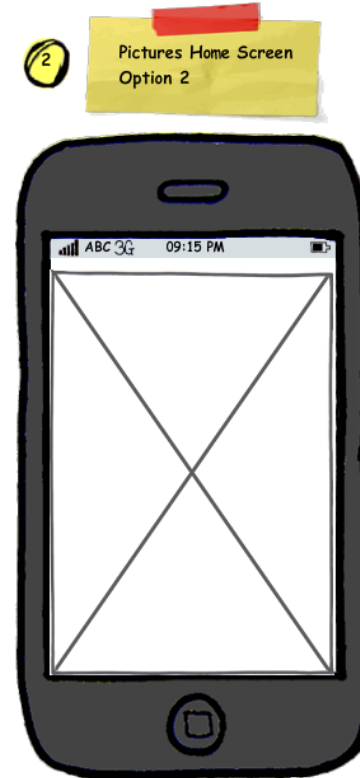

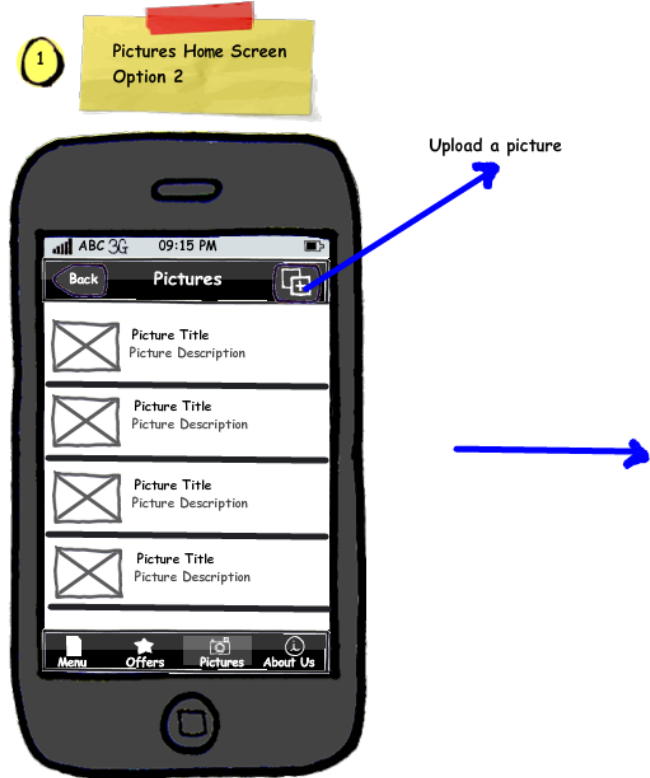

Offers Home Screen

We will use Page Scroll method here as the Restaurant will not have many active deals. So, the user can just swipe left/right to browse through all of them. But this will only be applicable if all the information fits in this space and there is no vertical scroll.

OR

We can use either of the above two layouts depending upon the pictures. If they have a small description and/or a caption, we can use layout 2 otherwise we can use layout 1.

1

About Us Screen

To google maps for directions

Foursquare/Facebook

All these will go to in-app browser
